FEATURES

- ❑ Comprehensive security program assessments and roadmaps
- ❑ Fractional or virtual CISO services
- ❑ Compliance assessments and roadmaps
- ❑ Security program and policy development
- ❑ Secure supply chain program development

The growing importance of GRC

Governance, Risk Management and Compliance (GRC) broadly addresses how an organization implements controls, identifies and manages risk, and complies with applicable rules and regulations. Both the scope and importance of GRC are growing in response to the evolving landscape of cyber threats, as well as a wave of new regulatory compliance obligations arising from concerns about privacy, safety, and AI technologies.

Our approach

Tangible Security provides a wide range of services including expert guidance and support to make your GRC initiatives successful. Our consultants work closely with you to develop and implement effective GRC frameworks, policies, and processes tailored to your specific needs and industry requirements. We offer expertise in risk assessment, regulatory compliance, policy development, and monitoring.

Customer success

From security program development assessments that identify and remediate weaknesses for multibillion-dollar financial firms to HIPAA gap assessments and reviews of policy controls for large regional health systems, Tangible Security helps organizations get secure and compliant.

Our fractional or virtual CISO services provide organizations like the City of Greensboro, N.C. with access to experienced security professionals who act as their CISO, additionally performing risk assessments, security program assessments and policy development.

With our GRC services, organizations can enhance their governance practices, strengthen risk management capabilities, and achieve compliance across their operations.

End-to-end Governance, Risk Management, and Compliance Services

Fractional CISO Service

Have an experienced security professional act as your CISO or trusted security advisor on a virtual and part-time basis, without the need for a full-time CISO.

Risk Assessments

Get a comprehensive evaluation of potential vulnerabilities and impacts to your critical assets and operations, along with a detailed set of reports and recommendations.

Security Program and Policy Development

Our team will establish a comprehensive security framework, including guidance on risk management, incident response, access controls, and data protection.

Security Program Assessment and Roadmap

Our team rates the security maturity of your organization and provides an actionable roadmap for reducing risk using frameworks such as NIST, ISO 27001, and CMMC.

Compliance Assessments

Get a comprehensive compliance gap assessment for CCPA, CMMC, FCC 23-60, FERPA, FINRA, GDPR, HIPAA, HITRUST, PCI DSS, SOC 2, SOX, FISMA, COBIT, and more.

FedRAMP and CMMC Services

Get and maintain compliance with the Federal Risk and Authorization Management Program (FedRAMP) and the Cybersecurity Maturity Model Certification (CMMC).

Secure Supply Chain Services

We conduct a comprehensive risk assessment, along with risk mitigation strategies, vendor management solutions, and services to build secure supply chains.

Human Cyber Risk Services

Get a comprehensive set of solutions to address human cyber risk. Services include program evaluations, managed services, and social engineering awareness.
