

INCIDENT RESPONSE & FORENSICS

BENEFITS

- ❑ Prepare for, respond to, and recover from security incidents
- ❑ Build capability to respond to security incidents, minimize damage, and restore system security
- ❑ Eradicate threats and restore systems to a secure state

FEATURES

- ❑ Swift and effective incident response to restore systems
- ❑ Customized incident response plans and playbooks
- ❑ Remote incident response triage and analysis
- ❑ Incident response program assessment and recommendations

You need to be prepared for a cyber attack

Most organizations will suffer a cyberattack at some point. An essential part of security preparation is creating and implementing a cybersecurity incident response plan and playbooks. These documents contain the strategy, processes, and procedures for detecting, responding to, and recovering from a compromise incident. Incident response rehearsals and simulations are just as critical. Preparation can help minimize the impact and disruption to an organization, protect your reputation, quickly restore operations, and reduce the cost of a breach.

Our approach

Incident response services delivered by our expert team include program development and planning, playbook development, tabletop exercises, compromise assessments, incident response triage and analysis, digital forensics to determine the cause of security incidents, and remediation to eradicate threats and restore systems.

Customer success

From providing active defense in combating a determined cyberattack against a multibillion-dollar pipeline operator to improving incident response plans and building in resiliency for critical services for a prominent university medical center, Tangible Security helps organizations of all types get and stay secure.

Our team of cybersecurity experts will provide immediate, effective assistance in responding to security incidents. Because our sole focus is cybersecurity, we can provide a tailored incident response program for your organization, including the unique needs of specialized industries and accompanying compliance requirements.

Fast and effective incident response and forensics services

Incident Response Program Assessment

Our expert team conducts a comprehensive evaluation of your organization's incident response capabilities, processes, and procedures to identify gaps and provide recommendations for improvement, enhancing your readiness.

Incident Response Plan and Playbook Development

We work with your organization to create a comprehensive strategy to respond to security incidents, including response plans and playbooks that outline clear steps, roles, and responsibilities, enabling you to mitigate the impact and restore operations.

Incident Response Tabletop Exercises

We provide a tailored, scenario-based simulation of a cyberattack to test the effectiveness of your response plans, communication protocols, and decision-making processes. The results will identify strengths, weaknesses, and areas for improvement.

Compromise Assessment

Our expert team proactively investigates an ongoing or past security breach. We conduct a thorough evaluation to determine if a compromise has occurred, assess the impact, and provide steps to eradicate the attacker and return your systems to a secure state.

Incident Response Triage and Analysis

This remote service provides an immediate, cost-effective way to get an initial assessment of cybersecurity incidents. We investigate, triage, and consult with you, and then determine if you need more extensive incident response services.

Incident Response and Digital Forensics

Our team offers swift and effective incident response services to minimize the impact of breaches, malware, and other threats. We conduct a full investigation to identify the cause of incidents, collect evidence, and provide guidance to prevent future attacks.
